22 May 2017

- ▶ Aims of the project
- ▶ Protein structure basics
- ▶ Types of constraints
- ▶ Zipping and assembly method (dynamic programming) for generating solutions
- ▶ Results
- ▶ Conclusions and to-do list

- ▶ **Aims of the project**
- ▶ Protein structure basics
- ▶ Types of constraints
- ▶ Zipping and assembly method (dynamic programming) for generating solutions
- ▶ Results
- ▶ Conclusions and to-do list

- ▶ **Practical side:**

- ▶ protein modelling using a limited set of constraints for reducing the cost of expensive and time-consuming experiments

- ▶ **Technical side:**

- ▶ combination of zipping and assembly method with easy-to-obtain distance and angle constraints
- ▶ use Prolog for generating distance and angle constraints

- ▶ Aims of the project
- ▶ **Protein structure basics**
- ▶ Types of constraints
- ▶ Zipping and assembly method (dynamic programming) for generating solutions
- ▶ Results
- ▶ Conclusions and to-do list

Protein primary structure

[By National Human Genome Research Institute [Public domain], via Wikimedia Commons]

Protein main chain model

Torsion angles

ϕ and ψ torsion angles from a library of proteins from the Protein Data Bank

- ▶ Aims of the project
- ▶ Protein structure basics
- ▶ **Types of constraints**
- ▶ Zipping and assembly method (dynamic programming) for generating solutions
- ▶ Results
- ▶ Conclusions and to-do list

Protein modelling: what information is used?

- ▶ Angle constraints
 - ▶ range limits on ϕ and ψ
- ▶ Distance constraints
 - ▶ upper and lower bounds on the distances between pairs of atoms

- ▶ Aims of the project
- ▶ Protein structure basics
- ▶ Types of constraints
- ▶ **Zippering and assembly method (dynamic programming) for generating solutions**
- ▶ Results
- ▶ Conclusions and to-do list

Zippering and assembly of a protein with 10 residues (single residues)

Second level of ZAM

Zippering and assembly of a protein with 10 residues (3 residues)

Zippering and assembly of a protein with 10 residues (4 residues)

Zippering and assembly of a protein with 10 residues (5 residues)

Zippering and assembly of a protein with 10 residues (6 residues)

Zippering and assembly of a protein with 10 residues (7 residues)

Zippering and assembly of a protein with 10 residues (8 residues)

Zippering and assembly of a protein with 10 residues (9 residues)

Zippering and assembly of a protein with 10 residues (10 residues)

- ▶ Aims of the project
- ▶ Protein structure basics
- ▶ Types of constraints
- ▶ Zipping and assembly method (dynamic programming) for generating solutions
- ▶ **Examples**
- ▶ Conclusions and to-do list

human p8MTCP1 [PDB entry: 2HP8]

```
residue(1,'MET').  
residue(2,'PRO').  
residue(3,'GLN').  
residue(4,'LYS').  
residue(5,'ASP').  
residue(6,'PRO'). % etc.
```

```
disulphide_bond(7,38).  
disulphide_bond(17,28).  
disulphide_bond(39,50).
```

```
alpha_helix(8,20).  
alpha_helix(29,39).  
alpha_helix(48,62).
```

Constraints used in modelling human p8MTCP

Best model and experimental structure ($C\alpha$ RMSD: 2.6 Å)

Actual cells used for constructing 1 protein model

Actual cells used for constructing 50 protein model

Constraints used in modelling human p8MTCP

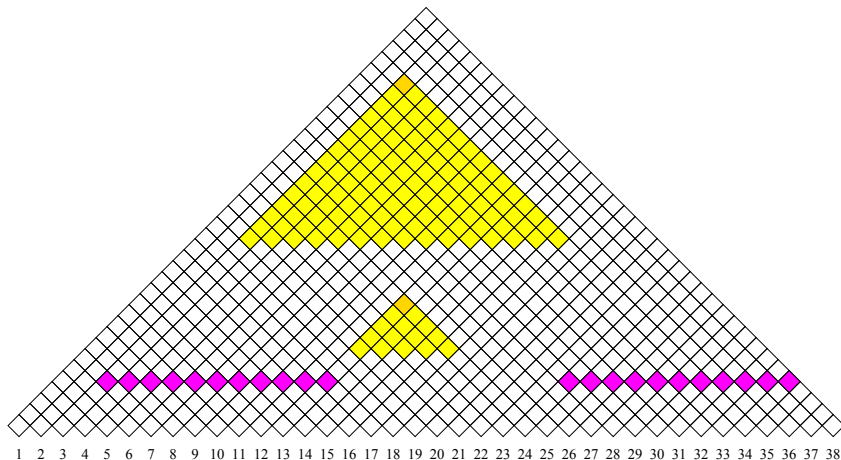

Constraints used in modelling 2LWL

Constraints used in modelling 2LRD

Constraints used in modelling 1E10

Constraints used in modelling 1EIG

Constraints used in modelling 5CKA

- ▶ Aims of the project
- ▶ Protein structure basics
- ▶ Types of constraints
- ▶ Zipping and assembly method (dynamic programming) for generating solutions
- ▶ Examples
- ▶ **Conclusions and to-do list**

▶ **Conclusion:**

- ▶ Our program is able to produce protein models
- ▶ Not all the cells contribute to the final structures

▶ **To-do list:**

- ▶ Use longer fragments
- ▶ Make better use of memory
- ▶ Use scoring function for filtering and ranking
